- REST API Content Endpoints
- Post Type Templates
- Theme API Goodies
- Custom Bulk Actions
- WP_Hook
- Settings Registration API
- Customise Changesets

Your Site, Your Way

WordPress 4.7 adds new features to the customiser to help take site owners through the initial setup of a theme, with non-destructive live previews of all changes in one interrupted workflow

Theme Starter Content

Welcome

Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

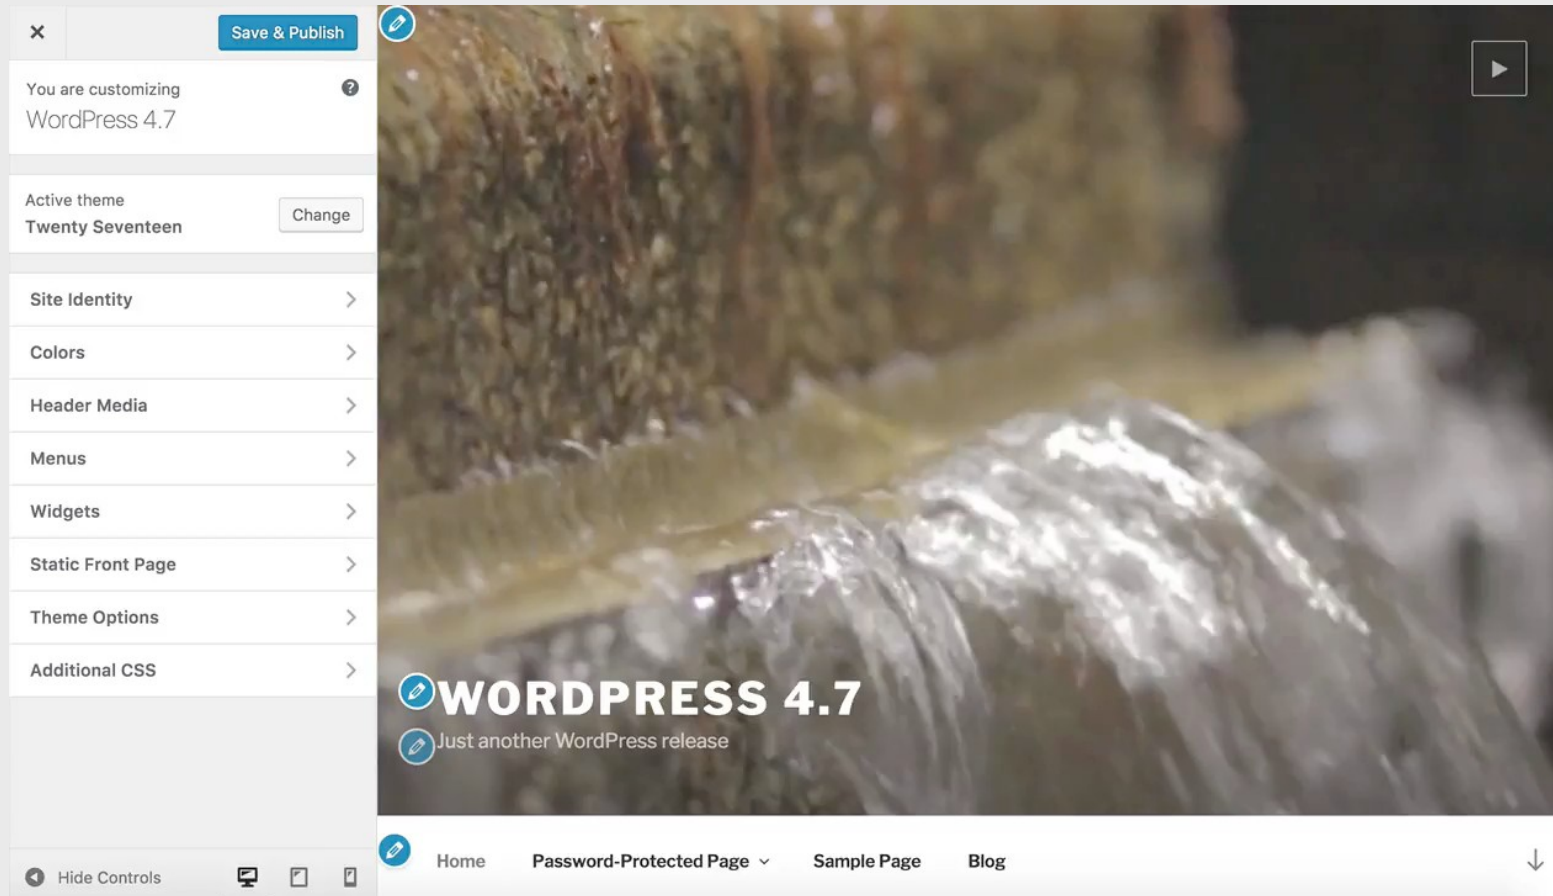

Site Title

Username
Usernames can have only alphanumeric characters, spaces, underscores, hyphens, periods, and the @ symbol.

Password
Strong

Important: You will need this password to log in. Please store it in a secure location.

Edit Shortcuts

Video Headers

Save & Publish

Customizing
Header Media

If you add a video, the image will be used as a fallback while the video loads.

Header Video

Upload your video in `.mp4` format and minimize its file size for best results. Your theme recommends dimensions of 2000 × 1200 pixels.

Remove Change Video

Or, enter a YouTube URL:

Header Image

While you can crop images to your liking after clicking **Add new image**, we recommend matching the size of your video.

Current header

WORDPRESS 4.7

Just another WordPress release

Home Password-Protected Page Sample Page Blog

Smoother Menu Building

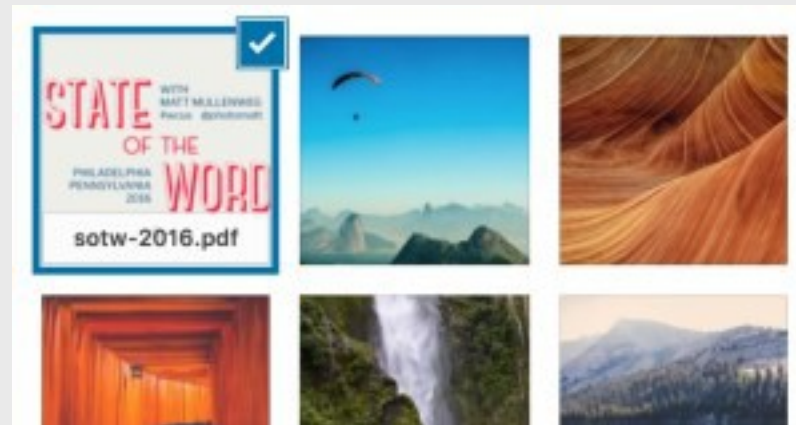

You can now add pages while building menus within the customiser instead of leaving the customiser and abandoning your changes.

Live Preview Custom CSS

```
/*  
You can add your own CSS here.  
  
Click the help icon above to learn  
more.  
*/  
  
.site-branding-text h1 {  
    font-size: 60px;  
}
```

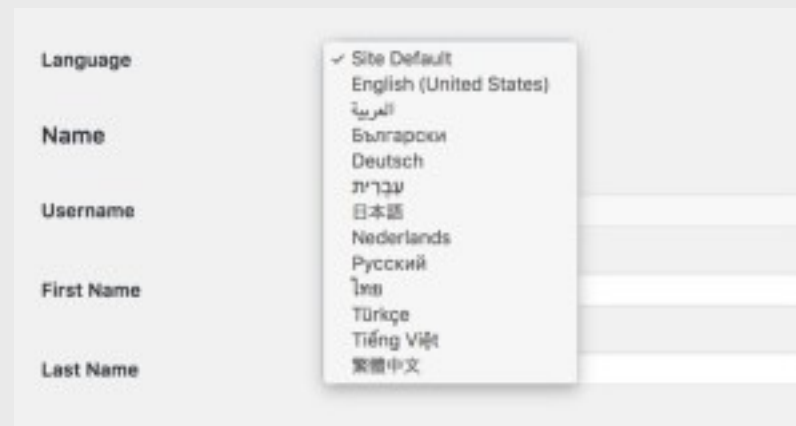

If you just need a few visual tweaks, you can now add custom CSS and instantly see how your changes affect your site without having to refresh the page.

PDF Thumbnail Previews

Uploading PDFs to the media library will now generate thumbnail images so you can easily distinguish between all your documents.

Dashboard Languages

You can now add multiple languages to your dashboard

and let your users set a preference via their user profile.

REST API Content Endpoints

Content endpoints provide machine-readable external access to your WordPress site paving the way for new methods of interacting with sites through plugins, themes, apps and beyond.

Developer Happiness

Post Type Templates

WordPress has supported custom page templates for over 12 years, allowing developers to create various layouts for specific pages.

By opening up the page template functionality to all post types, theme developers have even more flexibility with the WordPress template hierarchy.

Developer Happiness

Theme API Goodies

WordPress 4.7 includes new functions, hooks and behaviour for theme developers.

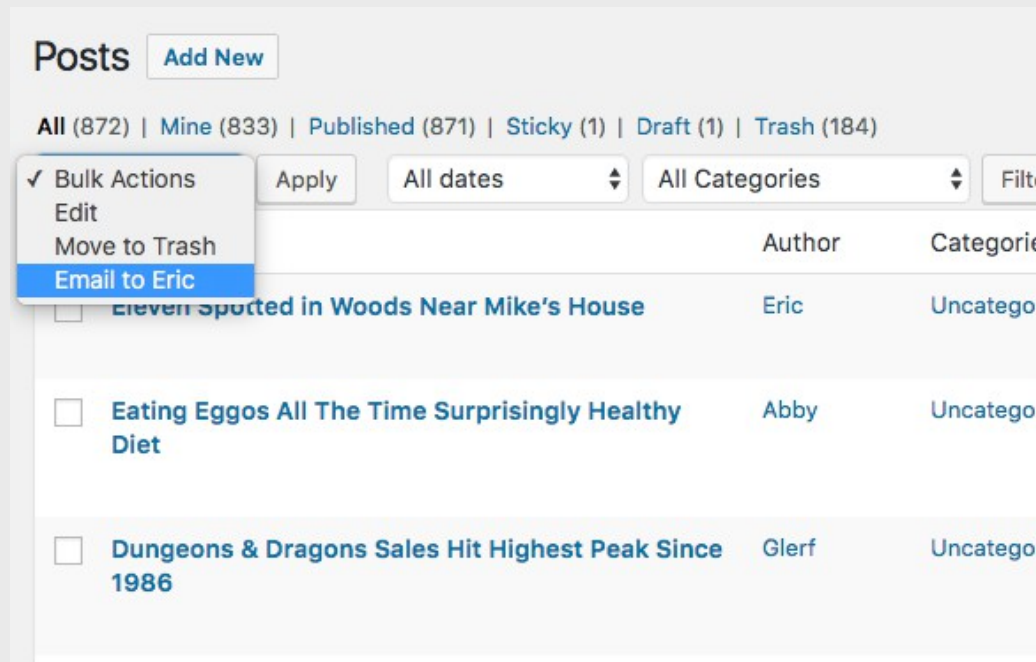

The **`get_theme_file_uri()`** Function, and Friends

The **`{$type}_template_hierarchy`** Filter

Simpler Template Names for Content with Non-ASCII Slugs

Developer Happiness

Custom Bulk Actions

Developer Happiness

WP_Hook

The code that lies beneath actions and filters has been overhauled and modernised, fixing bugs along the way.

If your plugin directly accesses the **\$wp_filter** global rather than using the public hooks API, you might run into compatibility issues.

Developer Happiness

Settings Registration API

Register_setting() has been enhanced to include type, description, and REST API visibility.

This is especially useful in the REST API,
where WordPress needs to know the type of data your setting is.

Developer Happiness

Customise Changesets

Make changes in the customiser persistent, like autosave drafts.

These are what make new features like starter content possible.

Accessible Alt Text for images

WordPress automatically used file names as title and alt text for images.

Now it will leave the alt text field blank if a user does not make any changes to the title or alt text fields when uploading an image.
